
Subject: mpeg warning, but what does it mean?

Hello all,
I just received the following warning from the IDL MPEG writer that is
called from XINTERANIMATE:

```
% MPEG Warning: Picture not completely in buffer at intended decoding time  
(decoding_time=73400.0, t_EOP=222025.0)
```

Does anyone know if this effects the results in the MPEG file and if so, how
it can be avoided?

Greetings,
Haje
