Here are some articles you might want to read:

http://www.dfanning.com/tips/mpeg_movie_player.html

http://www.dfanning.com/fileio_tips/mpeg_rate.html

<http://www.dfanning.com/tips/howmovie.html>

Cheers,

David

Most platforms should have some sort of viewer installed by default. Windows has Windows Media Player, Mac OS has Quicktime viewer, and the various flavors of Unix and Linux should have a proprietary package or Xanim either already installed or easily obtained precompiled.

All should be able to play MPEG-1 files. If you are creating MPEG-2 files you'll want to test them with these players first. I know that Windows Media Player has problems with MPEG-2 files but I am unsure about Quicktime and Xanim.

In addition

there is a movie player package mplayer for linux available which is
able to play nearly all kind of movie files.

You find it on freshmeat or sourceforge.

regards
