Nope - I bought and used MSVC++.Net (which, by the way, was a 2GB ... yes,
you read that correctly) installation!

However, I had a similar problem when I built my port access library with
MSVC++. Unfortunately I don't have the code to hand, but essentially the
problem was that you need to export the declarations to make them visible
outside the DLL. Under some window OS's you can right-click on the DLL and
select something like "Quick View" and it'll tell you the entry points -
with the error on my system there were none. I then fiddled around with
'extern "C"' and "__declspec(dllimport)" (which is MS specific) and
suddenly it started working. I should admit here that I got help from a
friend who knows *much* more about MSVC than I to figure this out.

I hope this rant is of *some* help:-)

Dave
