I was waiting to install 10.2.3, and I think I'll wait some more
--until I hear that you've been able to make IDL work!

In the above, do you mean that you've cd'd into
/Applications/idl_5.6/bin/
and typed "idl" and it's "not found"?
When you "ls" the directory are idl and idlde even there?

With my first installation on 10.2.2, it took me a while to get
all of my idl_setup / idl_startup and path variables set
up, but it was just like any other typical UNIX joy.

If you do get it working, please post again saying what the
problem was.

Happy Holidays,

M. Katz

So I am not entirely sure what happened but I seemed to have gotten it
working.

When I installed 5.6 initially I had installed it from downloading the
files from RSI's web site. Hence the problems. However this morning I
deleted all the idl files and installed it from the cd. No problems at
all! Seems like it just might have something to do with the version I
downloaded or something happened along the way.

It is now working just fine under 10.2.3 - at least so far.

Happy New Year,
Catherine
