I've asked a couple of questions here about plotting spheres as objects(andi've gotten great answers, thx again!)

Now, I CAN plot a sphere, as an object. And, I CAN, put a texture map on the sphere.

I CANNOT plot any data to the sphere.

My question:

Should/Can I be plot data to the sphere directly?

OR, should i just plot the data to the texture image and then re-apply the texture?

thanks,
