If you have white as an index in your color table,
erase the window with that color before you display
your images. For example, if you have a gray-scale
color table loaded:

```
LOADCT, 0  
ERASE, Color=!D.Table_Size-1  
TV, image, etc.
```

If you are in 24-bit color, you could just do this:

```
ERASE, Color=fsc_color("white")  
TV, image, etc.
```

Cheers,

David
