Subject: equivalent of c function: gmtime Posted by fitz on Wed, 08 Jun 1994 20:21:51 GMT

I understand that systime(arg) will return either the number of seconds elapsed from Jan 1, 1970 or a string with the current date and time. Does anyone know of procedures that are the equivalent of the C functions: gmtime, asctime, difftime, etc? In particular, given the seconds from Jan 1, 1970, is there a way to get a string giving the day, date, and time?
