Subject: slight fix for where_array.pro

Hello,

here is a slight speed (and programming style) fix to the program
where_array.pro that I posted a few days ago. (thanks dave.)

replace the line that look something like the following:
I = AA eq BB
Ia = where(i) mod Na
Ib = where(i) / na

with something like this:

I = where(AA eq BB)
Ia = i mod Na
Ib = i / na

Kinda obvious why, but it had to be pointed out to me too. (why use two
where's if one will do.)

 (gotta love being human and being able to make pretty basic mistakes
 like this)
