WTB: Used documentation for IDL, PV-WAVE.

I use both IDL and PV-WAVE. My work does not buy as many sets of manuals as there are people, and I often prefer using paper documentation to on-line.

New documentation is expensive. As near as I can tell, most people just throw out the older versions, when they update. That seems like a waste, especially since most of the versions we are using are out of date. So I would be interested in buying people's used documentation from the previous version of IDL and PV-WAVE.

IDL 5.6 and PV-WAVE 7.5 are the current versions; I would like to buy documentation from IDL 5.5 and PV-WAVE 7.4. (If you bought more documentation than you need, I'll be happy to buy docs from the current version.)

I am especially interested in the "Reference Manuals". (People who don't buy reference manuals can't help me.)

I would gladly pay \$30 + UPS ground shipping for the reference manuals for either, somewhat more if are selling the other manuals at the same time.

Better hurry! People are throwing out the old manuals. I may manage to scrounge some first.
