Hi,

I am currently trying to create a color plot using IDL. The default color table is in RGB and I would need to use the CMY color composite. I have been trying to use xpalette to go from RGB to CMY but it did not work (no change in my color table).

Any help would be great, Thanks Sebastien

It is not supported at the moment, I did a feature request already last year and it gets high priority.

We have to wait for 6.0

We have to wait much longer. Last information is not before 6.2

You should add a feature request about this too.
