I am trynig to install pwwave on gentoo Linux. This doesnt have the sun version of hava installed but the blackdown version

I tryed with `INSTALL /opt/blackdown-jdk-1.3.1/bin/java`
and it sorta works, the gui comes on and it creates the directory but nothing else. No errors reported andeven says installatin complete, but when I go to the directry I installed on is empty

Then I try with jdk
`INSTALL /opt/sun-jdk-1.4.1.01/bin/java`
and this time I get the error

java.lang.UnsatisfiedLinkError:
/opt/sun-jdk-1.4.1.01/jre/lib/i386/libfontmanage
r.so: libstdc++-libc6.1-1.so.2: cannot open shared object file: No
such file or
directory

and

java.lang.Exception: Stack trace
