Hello, All !

1. Is it possible to call in IDL under Windows .exe files compiled in Delphi using CALL_EXTERNAL or some other ways ? Are there any ways to call .exe files from IDL using OS commands ?

Any ways to call Delphi programs from IDL under Windows?

2. Are there any ways of speeding up the execution of IDL program using options of IDLDE ? How can one optimize a .sav file in order to increase the speed of its execution using options of compiling or other methods?

Thanks in advance.

Best regards, Evgeny Turchin.
