Hello, All!

1. Is it possible to call in IDL under Windows .exe files compiled in Delphi using CALL_EXTERNAL or some other ways? Are there any ways to call .exe files from IDL using OS commands?

Any ways to call Delphi programs from IDL under Windows?

2. Are there any ways of speeding up the execution of IDL program using options of IDLDE? How can one optimize a .sav file in order to increase the speed of its execution using options of compiling or other methods?

Thanks in advance.

Best regards, Evgeny Turchin.
