Why not create the single checkbox in a separate exclusive base, not as part of cw_form?

Cheers,
Pavel

Hello!

Because, this widget is used in very complicated program, and it would be nice if the values of some parameters entered by user were obtained with single cw_form (it is more simple to get the states of fields with using cw_form then standart widget construction).

Moreover, I don't believe that it is impossible to make a single checkbox in cw_form. It would be very strange , I think. :)

Cheers,
Sergey K

Well, I'm no expert on CW_FORM, having never used it,
but I sincerely doubt this statement. :-)

Cheers,

David
