Hi

I need for help to programming ENVI.

I want only read some points (x,y,DN) from some images opened in ENVI.

I'am trying with DISP\_GET\_LOCATION but I cant display image and the function DISP\_GET\_LOCATION gives me (x,y) of the last point I have click!

How can I do it?

thanks

Roberto

You probably need to write a user-defined move/motion routine. Look at the ENVI Programmer's Guide ("proguid.pdf") documentation manual included with the installation. The "Interactive User Routines" chapter has a section on "User Move Routines".
