Hi all,

I am a new user of IDL and facing trouble trying to open MODIS images and its products, which are in HDF and HDF EOS format. I am able to see that ENVI can open those files but I want to write a code to extract the values in those files. Could someone help me out with this? maybe by pointing out some sources where I could get more info.

Thanxs

Gautam

I've written a few IDL programs on some level 3 temperature data which your welcome to. What are you working with specifically?
