---

We installed Wave at our SparcCenter 2000 (SOLARIS 2.3). It runs but we do have some problems.

- If I want to read the documentation and chose a guide from the initial (white) menu it offers a (blue) menu of the chapters. Now I can't choose one of these. The mouse moves the highlighted bar but one can't select an item. The whole X-Server is frozen at this

point actually, that is, I can't select other windows. One has to KILL FrameViewer from another session.

- If I type `demo` at wave prompt, WAVE crashes. (Segmentation fault, coredump.)

Thanks for any HELP. Please answer by Email.
