Hello All,
      I am trying to run rsilicense after installing
IDL 5.6 on my Redhat 9.0 system (Pentium III) and the
application crashes with this error:

Warning:
      Name: textfield
      Class: XmTextField
      Character '\160' not supported in font. Discarded.

Warning:
      Name: textfield
      Class: XmTextField
      Character '\150' not supported in font. Discarded.

Warning:
      Name: textfield
      Class: XmTextField
      Character '\171' not supported in font. Discarded.

      etc. And the programme crashes with a segmentation fault.

      Can anyone tell me what is going on there and how I fix it. As far as
I know, I have installed all the fonts avalaible for X.
      Thanks,

                  Karthik.
