
Subject: String Data file

Hello All,

I have a data file that looks like this:

abc 1 2

def 3 4.5

ghij 2.3 23.44

...

...

The first column is string, the next two are floating point. Is there any way I can read such a file?

I am familiar with counting the number of rows and reading data file with just numbers, but this combination of numbers and strings is too much for me.

Thanks in advance,
Karthik.
