Hello Everyone,

I am adding a chapter on calling C++ from IDL to my book "Calling C from IDL". I have it working on windows, Linux, and Mac OSX and I am looking for volunteers to get it running on the other platforms. For Linux and OSX it was only a matter of getting the compile flags right, so I expect that would be the same for the other *NIXs.

Anyway, if you are interested send me an email at ronn@rlkling.com (first received, first picked) with this information.

Name

OS you will test on.

Address

I will mail you the chapter from the book, IDL code, C++ code and makefile.

Thanks!

Ronn Kling
