If it is a nontrivial IDL application what you will need a really good library that implements the RSI-supplied routines your app uses. Depending on what you need, a suitable library may or may not already exist in a form callable from C++. If it does, any competent C++ programmer should be able to do what you need. If not, you need a team of experts to build the library.

The newsgroup comp.lang.idl has nothing to do with the Interactive Data Language. The readers of that newsgroup would appreciate it if you do not cross post your Interactive Data Language questions there in the future.
