Subject: Welcome to ITOOLS....
Posted by Wayne Landsman on Fri, 15 Aug 2003 19:39:45 GMT

Anyone have any opinions about the V6.0 ITools yet?   My initial fear
is that it is so loaded with features that the learning curve will be steep.

The most important thing I want to do with plots is zoom in on subsets
of data.   For example, if the initial X range is from 0 to 10 and I
see an interesting feature between 3 and 4, then I want to interactively
reset the X range to [3,4].   I can do this manully with IPLOT, by
clicking on the Visualization browser and then clicking on PLOT and
entering new values of the X minimum and maximum
But ideally, this could be done interactively by clicking over the
desired range, as in Paul van Delst's program WPLOT
