Hello guys !

Let me describe a problem. I have an image and I need to overlay the image's contour. Here is an example of what I'm doing :

pro test

```
image=LoadData(12)
window, 0, xsize=500, ysize=500
TVIMAGE, image, pos=aspect(1.)
CONTOUR, image, /noerase, position= aspect(1.)
```

end

But as a results I get shifted contor :(How to combine them exactly ?

VIMAGE, LoadData and ASPECT are from D.Fanning's library.

Could you help me ?
