Hi,

could someone help me with this error message:

> Tag name IDLITCOMPONENT_TOP is undefined

In my source code I have an object 'A' which is subclassed from object 'B' which itself is subclassed from IDLgrRoi.

The error sometimes occurs during a function call equivalent to:

A->setProperty, color=2

Could someone explain what happens here?

Thanks for any help

Cheers

Oliver

Well, as you get older it will be a comfort to have so many pretty, young women desiring you and your (enhanced) abilities. :-)

Cheers,

David
