
Subject: filesearch doesn't find the same files as findfile on a networked drive
(unencrypted)

(The original post was encrypted--sorry about that)

I am trying to access files on a networked drive in Windows NT. The networked drive is:

\Cygnus\Raytheon_shared

Find file and file_search give different results:

```
IDL> print, findfile('\\Cygnus\Raytheon_shared\Updated Test Files*'),  
format='(a)'  
\\Cygnus\Raytheon_shared\Updated Test Files\.\  
\\Cygnus\Raytheon_shared\Updated Test Files\..\\  
\\Cygnus\Raytheon_shared\Updated Test Files\Test_Data\  
\\Cygnus\Raytheon_shared\Updated Test Files\Test_Data_Migration_Tool\  
\\Cygnus\Raytheon_shared\Updated Test Files\Test_FITS\  
\\Cygnus\Raytheon_shared\Updated Test Files\Test_results\
```

IDL>

```
IDL> print, file_search('\\Cygnus\Raytheon_shared\Updated Test Files*'),  
format='(a)'
```

IDL>

I.e, file_search finds no files at all. If I map the networked drive to a drive letter, e.g. G:, both routines give the same result.

What am I missing about file_search?

```

I think you should use FILE_SEARCH, since FINDFILE is obsolete. And you are not concatenating strings properly. You want something like this:

```
fname ='C:\Documents and Settings\Mahesh Varma\My Documents\osiris\'  
files = FILE_SEARCH(fname + '*.hdf', COUNT=num)  
FOR j=0,num-1 DO Print, files[j]
```

Cheers,

David
