Subject: Hyperthreading

Posted by the_cacc on Tue, 28 Oct 2003 20:51:57 GMT

I'm about to purchase a new machine - has to be windows. I was just browsing around the specs on new machines I see there is a (marketing) revolution called hyperthreading.

From what I understand, it mimics the effect of multiple CPUs. Has anyone noticed if IDL can take use these hyperthreads to any advantage?
