Subject: Work with ENVI vector layers
Posted by Evgeny Turchin on Thu, 06 Nov 2003 07:10:16 GMT

Hello, All !

I have several questions regarding ENVI and IDL.
How can one programmatically do the following:

1) place a file with evf extension in Available Vectors List (AVL) window
and to display file in it ;
2) delete a vector layer from AVL;
3) display a vector layer in a vector window;
4) overlay a vector layer on an image in the opened display window.

Thanks in advance.

Best regards, Evgeny Turchin.

I don't know whether RSI will release somthing like "Inside ENVI" in
the future. ENVI Online Help does not include documents for those
routines which can server your purpose. But they do exist.

Tian.
