AhhhhHHH!   Now there's no way that I'm having dinner with you. :-)

David - I checked your web page but there seems to be something wrong with
my color table. Somehow it keeps overriding the default with loadct,0. I
tried decomposed=0 but that did not help. Any suggestions on how to render

your new photo with the correct colors?

I *knew* it was a mistake to update that picture. :-(

Cheers,

David

 I figured it out, David - Setting the DECOMPOSED keyword to TRUE gave an
accurate rendering of your new picture.
Dick French

Hey, stop this personal attack!
David looked almost like that the last time I saw him. The only thing
is, I can't tell what's in the background. Looks like a wall of some
unfinished home improvement project? :-)
When and where's the lunch, by the way? :-)

Pavel
P.S. There was something classy with the b/w look of that other photo, I
must admit. Well, I still got it on my books :-)
