Subject: How to use built in functions of ENVI in IDL program
Posted by shishir332 on Tue, 06 Jan 2004 12:48:13 GMT

Hi all
Can someone help us out as to how to use the built in functions of
ENVI in a GUI widget created using IDL program. In other words is it
possible to call these functions from a program written in IDL.
For e.g. suppose after opening an image file in ENVI we use the Region
of Interest function (available under the Overlay tab). Now,can this
function be called from within a GUI widget created by an IDL program.
That is we want to in a manner import the functionality in our own
program.

Any help in this regard would be appreciated.

Thanks.
Shishir
