## Subject: Group leader question Posted by robert.dimeo on Wed, 14 Jan 2004 15:02:52 GMT View Forum Message <> Reply to Message

Hi,

Is it possible to determine all of the top-level base ids of applications running whose group leader is the only id "known"? That is, can a function be written such that

tlb\_ids = GET\_ALL\_TLB\_IDS(group\_leader\_id)

where the return value, tlb\_ids, is (possibly) a long array of widget ids each of which have group\_leader\_id set as their group leaders? (Perhaps I missed some simple keyword to WIDGET\_INFO?)

Thanks,

Rob
