
Subject: Changing common variable definition

Hi,

If I write some routines that share the line say:

```
common my_vars, x, y
```

and then add a variable:

```
common my_vars, x, y, z
```

and recompile, I get an error:

```
% Attemp to extend previously defined common: MY_VARS
```

Is there any way to redefine a common variable?

Thanks,

Matthew
