I have a new copy of PVWAVE personal edition, and I wonder if anybody has clawed their way through the problems involved with printing window output without getting a slightly colored background. I read PVWAVE's release notes about setting !P.Color=0,!P.Background=!D.N_colors-1, and using the Palette routine. Problem is:

- 1) This all seems kludged together (but anyway...)
- 2) When I play with the Palette routine, the cursor disappears after exiting Palette.

Obviously there are some bugs here, and the nice thing to do would be for the WAVE folks to correct them. Short of that, do any users out there know elegant solutions. All I want is decent-looking hardcopy!
