Subject: IDL and fonts on an Xterminal

---

When I run the following IDL commands

```
IDL> !p.font=0
IDL> device,font="Times-Bold10"
IDL>
```

on a SS10 running Solaris 2.x, IDL accepts the font name and it is available in text command.

If I run the same IDL command on an HP Xterminal I get the following:

```
IDL> !p.font=0
IDL> device,font="Times-Bold10"
% DEVICE: Requested font does not exist: Times-Bold10.
% Execution halted at $MAIN$ (DEVICE).
IDL>
```

Is there a way I can make the openwin bitmap fonts available to my Xterminals?

Thanks  
Robert
