Subject: Colormap in idl -vm Posted by Yunxiang Zhang on Tue, 23 Mar 2004 21:52:37 GMT View Forum Message <> Reply to Message

Hi, Folks

I was not able to make the colormap work properly with idl virtual machine. The image always looks b/w and TVLCT defined color is always black.

For example, LOADCT won't do anything and the following code gives me totally black screen. This happens only in virtual machine mode(Linux). :(

TVLCT, [[0], [255], [31]], green PLOT, x, my_func, color=green

Is it a common problem or I have to know some tricks here? Thanks!

Best, Yunxiang
