Hi, Folks

I was not able to make the colormap work properly with idl virtual machine. The image always looks b/w and TVLCT defined color is always black.

For example, LOADCT won't do anything and the following code gives me totally black screen. This happens only in virtual machine mode(Linux).

:(

```
TVLCT, [[0], [255], [31]], green
```

```
PLOT, x, my_func, color=green
```

Is it a common problem or I have to know some tricks here? Thanks!

Best,
Yunxiang
