Folks,

I wanna do the following thing as fast as possible.

;creat a complex array a=complexarr(na) ;replicate the array k times b=rebin(a,na,k)

But rebin won't accept complex array. :(What should I do?

Another similiar question is what is the best solution to replicate a 2d image eg dist(512,512) k times to get a k-frame "still movie" as a 3d array movie(512,512,k) without using any loops?

Thanks,

Yunxiang
