In code produced with my dlmform program, I see that calls corresponding  
to e.g.

```
n = IDL_CvtLng(1,&argv[2]) /* May cause n to be tmp */
```

is followed with

```
if (n != argv[2]) IDL_DELTMP(n);
```

just before the return of the function. So, I think what IDL is complaining  
about is that you haven't explicitly deleted the temporary variables (which  
may or may not be created in the conversion calls).

IDL is doing it for you, but it's not very happy about it! Bug, feature,  
sanity check, call it what you want. My guess is that it's a QA thing for  
their own programmers, really.

Subject: Re: What is this error message about?

Stein,  
yes, this is the solution to the problem!

Thanks,  
Haje
