Subject: Legend for IDL Plot Posted by Andreas Ernst on Tue, 25 May 2004 13:47:39 GMT View Forum Message <> Reply to Message

I used PLOT and OPLOT to create a plot with multiple datasets inside it. The curves have different colors now (by using FSC_COLOR by Dave Fanning). Now I would like to include a Legend in order to know wich plot is which, and which parameters are used for which plot. How to do that?

Thanks in advance. Andreas
