
Subject: slider widget with predefined values

One more:

Does anyone have or know about a slider widget which goes through a range of predefined values? I want to have a zoom function in my GUI which can go through .25, .5, 1, 2, 3, 4 and no other values.

I know that I can do something with the /suppress_value keyword for widget_slider, but maybe there's already a solution out there...

Thanks,
Benjamin
