```

Dear Adhara
have a look at the dokumentation of Dialog_Pickfile. There is a
multiple_files keyword

Then you need a loop over the selected files.

```
n=n_elements(file)
for i=0,n-1 do begin
openr,lun,file[i],/GET_LUN
....
```

```
result = DIALOG_WRITE_IMAGE(scan, FILENAME=file[i]+'.tif')
endfor
```

If you like to have it more in batch process, You could do this by replacing
Dialog_Pickfile with file_search.

You should have a look on file_basename too.
