
Subject: Expand Polar Contour

I am curious whether there is a way to expand a polar contour plot. I have some data that is in polar coordinates that needs to be overlayed onto a geographic map. The data must remain in polar coordinates so that no resolution is lost. I have tried using the overplot keyword in the call to plot_contour, but I get an error while in the polar_contour procedure:

Internal error: Border sort

I am guessing this may to do with being in geographic mapping coordinates prior to the call to plot_contour. Any suggestions?
