Subject: Import Arc Export File to IDLffShape
Posted by btt on Wed, 28 Jul 2004 20:30:54 GMT

Hello,

I have a number of GIS files in ASCII ARC/INFO export file format
(filename.E00). I would like to add a method to the IDLffSHAPE file access
object. Something like

myObject->ImportARCfile, filename.E00

There are applications available to read these and convert them to shape
files... but they are for Windows and I'm on a Mac.   So, before I dig into
decoding the export file format I thought I might ask here.   Anyone blazed this
trail before?

Thanks,
Ben
