Subject: Interactive dialog_pickfile?

Dear Newsgroup,

Is there a routine that has similar functionality as dialog_pickfile with interactive functionality? The application is: as the user highlights files in the dialog box, I would want the file name string sent to a handler so that I could parse the file name and display the meaning of the several fields in each of the highlighted file names. Secondarily, I may want to display some of the properties of the highlighted files, such as file size, and modification date. Any suggestions?

Regards,

Charles Paxson

Hi Charles,

I have a copy of the ancient, original 1991 Pickfile.Pro from RSI which is
written wholly in IDL - no calls to platform specific GUI file pickers!

It is in fact pre-windows, but I've added the necessary bits to handle
Mr Gates.

I'll email you a copy.
