Hi everybody,

Perhaps you can help me. The problem is - I want to display an 2D-image and then overplot the data using PlotS. It looks like that:

```
....  
TVIMAGE, image, POSITION=pos, /KEEP_ASPECT_RATIO  
PLOTS, X,Y, COLOR=100
```

```
....
```

I tried to apply DATA or DEVICE keywords but without success.
How to make the data perfectly fitted with the image ?

Thanks,
James
