
Subject: Putting data in a map projection

I'm trying to do a simple task. I have a vector of (lat,lon,value) tuples and I want to put then in a map (a color representing 'value' in the (lat,lon) position). I'm using map_proj_forward and I want to respect the current projection. Who can I do it without an idlgrcontour or an idlgrsurface?. And after the projection the xy vector has different size than the original (lat,lon vector) and TEXTURE_MAP can't be used.

I know it is too confuse but I hope somebody help me.

Daniel.
