Subject: Currently allocated logical units

Hello, IDL users -

 I recently ran into trouble, running out of logical units when I
forgot to FREE_LUN the units I had previously allocated. I understand that
unit numbers 100--128 are allocated with GET_LUN. Is there any way to tell
what units have been allocated, or how many are left? In my case, I had
reassigned the variables and so couldn't tell from that.
(Running IDL 2.2.2 under VMS).

 Thanks,
