---

Hello,

Apologies if this is a brain-dead question, but perusal of the IDL help was unsatisfactory (and I couldn't find the required information :o) Ehem..

If I have a structure definition routine, `mystruct__define.pro`, that I use to create a structure like so,

```
x = {mystruct}
```

is there any way to obtain the structure name (apart from using "HELP, /STRUCTURE, x") ?

Thanks,

paulv
