Ok, never mind, I finally found the bug: I forgot to add the line if (kw.tilt) IDL_StoreScalar(kw.tilt,IDL_TYP_DOUBLE,&itilt); to my code. For some reason IDL is also really picky about where this has to appear. Well, for some magical reason it works now. But this magic is exactly why I will always prefer Fortran over C: C just controls me while I can control Fortran. :-)

```
can control Fortran. :-)
