Subject: Map_grid options
Posted by jcesq on Sun, 03 Oct 2004 22:06:50 GMT

Hello folks,

I'm using /box_axes option in the map_grid procedure to draw axes around my images. However, the text labels (lats and longs) are too near to the axes. How can I move alway these labels ?? The IDL's guide doesn't show any option to do that.

Cheers,
Jeferson

Just make two seperate calls to map_grid. In the first call, choose the color you want for the grid, and leave out the box_axes keyword. In the second call, choose the color you want for the box_axes, and choose the /no_grid option.

Ok... It worked out. Thanks,

Julio
