Associate Software Quality Engineer

We have a great entry level opportunity for a tester to join our Quality Assurance team in testing IDL from early development through to release. The successful candidate will be responsible for performing functional, application, regression and performance tests on moderate to large software projects under the guidance of senior QA Test Engineers. The person in this position will provide feedback on testing progress and results, set up and run test cases for assigned modules, and generally perform testing tasks to assure that developed products meet requirements specifications and are within quality limits and standards.

Minimum Required Skills and Qualifications:

- a.. Bachelor's Degree in Computer Science or the sciences or equivalent experience.
- b.. Zero to three years of experience in product testing, research, or development.
- c.. Familiarity with the software development process and lifecycle.
- d.. Good communication skills.

Desired Skills and Qualifications:

- a.. Experience building and executing requirements-based test cases and writing test problem reports.
- b.. Experience with installation and licensing technologies.

Send a resume and cover letter to jobs@rsinc.com.
